

## Betonmast introduces a requirement for a chin strap

**Betonmast introduces an order for a chin strap on all our projects from 1 January 2022. The introduction of a chin strap is an important measure on the way to our goal of zero injuries and accidents at our construction sites.**

This means that in order to gain access to Betonmast's construction sites after 1 January 2022, everyone who works on our projects must use an approved chin strap.

The statistics from reported incidents with head injuries show that in 9 out of 10 cases, the use of a helmet with a chin strap could reduce the consequence of the head injuries.

With the introduction of a chin strap for everyone, we hope the number of head injuries decreases, and that all our employees and partners come SAFE HOME - every day.

It is a requirement that the chin strap must have a 3 or 4 point attachment to the helmet, and that it releases when the load exceeds 15 kg.
